

# Back-End Developer Intern (m|w|d)

auvisus is a deep learning start up based in Karlsruhe, Germany. We use cutting-edge technologies to provide solutions for machine vision use cases in a variety of industries. Currently, we are focusing on developing an automated self-checkout system for canteens. For more information, go to [auvisus.com](http://auvisus.com).

## YOUR TASKS:

- › Design, develop, test, deploy, maintain and improve back-end services for the cloud and our edge-devices.
- › Work together with our machine learning team to embed and deploy ML code and models into microservices or serverless systems.
- › Use cutting-edge cloud-based/serverless technology stacks.
- › End to end responsibility – take care of features from requirements to deployment.

## YOUR PROFILE:

- › Currently pursuing a degree in computer science or in a related field.
- › Proficiency in Python or JavaScript.
- › General interest in machine learning and IoT.
- › Experience in defining and implementing RESTful APIs.
- › Familiarity with microservices and serverless architectures.
- › Ability to cope with high responsibility and dynamic requirements.
- › Hands-on mentality and an unremitting focus on getting the right things done.
